

# PROBLEM SOLVING WITH COMPUTING COMP 480

DR. ESMAIL BONAKDARIAN  
FRANKLIN UNIVERSITY  
WINTER 2010

27-Jan-10

COMP 480 - Winter 2010

1

## Today's "Menu"

- Overview
- Class Policies
- Introductions
- Basic Terminology
- A 'bit' of binary
- A bit of Python
- Exploration paper + Reflection Paper

27-Jan-10

COMP 480 - Winter 2010

2

## Announcements

- Famous Programmer/CS – bonus points!
- Practice Practice Practice! (note: no books, notes, calculators etc during exams)
- Review **Checkpoints** in text (solutions on CD)
- Don't forget about **Proctors**

27-Jan-10

COMP 480 – Winter 2010

3

## Overview

- What this class **is**:
  - Introduction to Programming for “newbies”
  - Focused on concepts, not language specifics

27-Jan-10

COMP 480 - Winter 2010

4

## Overview

- What this class **is**:
  - Introduction to Programming for “newbies”
  - Focused on concepts, not language specifics
- What this class **is not**:
  - “kinder & gentler” != no/little work
  - “easy A”
  - Don’t fall behind! Road vs. High-rise building ...
  - Advanced Programming or Python

27-Jan-10

COMP 480 - Winter 2010

5

## Overview (2)

- Who **you** are:
  - Curious about programming
  - No (or very little) experience with programming
  - Willing to put in the effort to work hard
  - Considering COMP 111 or ITEC 136

27-Jan-10

COMP 480 - Winter 2010

6

## Overview (2)

- Who **you** are:
  - Curious about programming
  - No (or very little) experience with programming
  - Willing to work hard
  - Considering COMP 111 or ITEC 136
- Who am **I**?
  - Enthusiastic about this class (proposed + designed it)
  - Lots of experience teaching “newbies”
  - High expectations of students
  - Enjoy teaching (esp newbies) + programming

27-Jan-10

COMP 480 - Winter 2010

7

## Why Python?

- Minimal syntactic overhead
- Easy to learn, lots of on-line resources/tutorials
- Clean, intuitive and friendly syntax
- Free and multi-platform (incl. IDE)
- Many additional libraries freely available (e.g, PIL)
- Proven to appeal to new programmers
- Fun (can be used interactively too)
- Not a toy: Used by Google, NASA, YouTube, ...

27-Jan-10

COMP 480 - Winter 2010

8

# Hello World

```
// Hello World in Java

public class HelloWorld
{
    public static void main(String[] args)
    {
        System.out.println("Hello World.");
    }
}
```

27-Jan-10

COMP 480 - Winter 2010

9

# Hello World

```
// Hello World in C++

#include <iostream>
using namespace std;

int main(void)
{
    cout << "Hello World\n";
    return 0;
}
```

27-Jan-10

COMP 480 - Winter 2010

10

# Hello World

```
// Hello World in Python 2.6  
print 'Hello World'
```

27-Jan-10

COMP 480 - Winter 2010

11

## Misc Items

- Distinguish between *our 'class' web page* (dynamic) **vs.** **FU web** page (somewhat static)
- Important to keep an eye on both – but especially the 'class' page
- e-mail works better! *Esp if done right*
- *Read* all materials written up for *you*.
- Expect e-mails Mon/Tue

27-Jan-10

COMP 480 - Winter 2010

12

## Introductions

- Your name? (special preferences?)
- Where you are from?
- Why are you here?
- Job and/or major?
- Hobby and/or major surprise.

27-Jan-10

COMP 480 - Winter 2010

13

## A bit of Binary (1)

- Bit – binary digit
- Byte – 8 bits
- Meaning of bits open to interpretation
- Use of *positional notation*
- Base 10 (decimal), 2 (binary), 8 (octal) and 16 (hexadecimal) are common
- Powers of 2 used for binary

27-Jan-10

COMP 480 – Winter 2010

14

## Decimal

- Powers of **10** used for decimal (a.k.a. **base 10**)
- Each 'digit' position is a power of **10**
- Valid digit values: 0 – 9 (note, 0 to base-1)
- Example:

$$132 = 1 \times 100 + 3 \times 10 + 2 \times 1$$

$$= 1 \times 10^2 + 3 \times 10^1 + 2 \times 10^0$$

So each value in a position is multiplied by a power of 10  
.. Another view:

$$\begin{array}{r} 1 \quad 3 \quad 2 \\ \times \quad \times \quad \times \\ 100 + 10 + 1 = 132 \end{array}$$

27-Jan-10

COMP 480 – Winter 2010

15

## A bit of Binary (2)

- Powers of **2** used for binary (**base 2**)
- Each 'digit' position is a power of **2**
- Valid digit values: 0 – 1 (note, 0 to base-1)
- Example:

$$1101_2 = 1 \times 8 + 1 \times 4 + 0 \times 2 + 1 \times 1$$

$$= 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0$$

So each value in a position is multiplied by a power of 2 ..  
Another view:

$$\begin{array}{r} 1 \quad 1 \quad 0 \quad 1_2 \\ \times \quad \times \quad \times \quad \times \\ 8 + 4 + 2 + 1 = 13_{10} \end{array}$$

27-Jan-10

COMP 480 – Winter 2010

16

## Examples

$$0 \ 1 \ 1 \ 0 \ 1_2 =$$

$$1 \ 1 \ 0_2 =$$

27-Jan-10

COMP 480 – Winter 2010

17

## More examples

All binary numbers:

0 1 1 0 1

1 0 0 1 0

0 0 1 1 1

27-Jan-10

COMP 480 – Winter 2010

18

## Summary/Recap

- Questions?
