Today's "Menu"
(week 3)

- Announcements
- More computing terminology
- Short-attention Span Intro to Functions
- Questions/Concerns?

Announcements

- Proctors! – Exam coming up next week
- No proctor => No exam => No pass.
- I've requested a "student view" for dropbox/myFranklin again …

Terminology

- variables – places in memory (RAM) to hold values (data)
- identifiers – names of variables and other "things"
- data types – the type of data we are storing, e.g.:
  - Integers: 1, 3, 5, 2049, -35, 0, 55
  - Floats: 88.15, -1.2, 66.7, 3.1415926535, 4.0
  - Strings: 'Jasmin', "theology", 'solitaire', "five"
- Key-/Reserved-words: part of the language

Code Examples

Detailed discussion of cost_calc1-6.py sample programs:
- use of constants,
- use of string formatting,
- general program lay out and,
- most importantly, use of functions.

Summary/Recap
