1. Page 145 – Multiple choice questions 1, 2, 3, 4, 8, 9, 10, and Algorithm Workbench #2 + 3 [11 pts]

All your programs must have a **main()** method that is called, and the last statement in your program has to be

```
raw_input('\n<enter> to exit.')
```

so that the program can be easily run in Windows without closing the console window (as shown in class).

2. Page 147 – Short Answer questions 1 – 6 [6]

3. Program #1 p. 148 – name this program **roman.py** [10]

DELIVERABLES

A zipped folder containing only the following two files:

1. One MS Word document with answers to questions
2. Program source file **roman.py**

Make sure every document contains your name and assignment numbers/description at the top.

---

[1] The number in () corresponds to the assignment number on the Franklin University web page and should be used when you submit your assignment via dropbox for proper credit.
